DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 2, 6, 8, and 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Davis, Jr.
- 3. Davis, Jr. teaches a method of increasing the air temperature of compressed air comprising compressing the air in a blower 11, directing the air toward an air delivery duct 16, diverting a variable portion of the compressed air back to the blower 11 though duct 32 with valve 33, and delivering the air to a drying device 37. Note column 3, lines 26-45 and Figures 1 and 3.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 3, 5, and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis, Jr.

art. In re Aller, 105 USPQ 233.

6. Davis, Jr. does not specify the range of air percentage diverted back to the blower or the outlet air pressure achieved by the blower. However, it would have been obvious to one having ordinary skill in the art to choose the ranges presently claimed, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the

- 7. Claims 4 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis, Jr. as applied to claims 1 and 6 above, and further in view of Bybee et al.
- 8. Davis, Jr. does not suggest controlling the temperature of the compressed air passed to the drying device 37 to a predetermined value. However, Bybee et al. teaches this method step in a similar drying process. Note column 8, lines 29-44. It would have been obvious to one of ordinary skill in the art to include Bybee et al.'s constant temperature with Davis, Jr.'s drying process with the motivation of achieving more uniform, predictable drying results.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Albers et al., Takuma, Wood, and Lysholm teach relevant methods for treating compressed air.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kathryn S. O'Malley whose telephone number is (703)308-2844. The examiner can normally be reached on M-F (8:30-5:00).

Application/Control Number: 10/073,035
